PROJECT TITLE: Job Portal with Search & Filters

GITHUB

LINK:<https://github.com/arthiranjani/job-portal-react-app-.git>

1.ABSTRACT

The Job Portal with Search & Filters is a React-based web application that helps students explore job opportunities easily. Users can view job listings, search for jobs by role, filter jobs by location, view detailed job information, and save favorite jobs. The application provides a simple and user-friendly

interface for finding suitable employment opportunities.

2.PROBLEM STATEMENT

Students often find it difficult to search for suitable job opportunities from multiple sources. There is a need for a centralized platform where users can quickly search, filter, and view job openings according to their preferences. This project aims to simplify the job search process.

3.OBJECTIVES

- To develop a React-based job portal application.
- To display job listings efficiently.
- To provide search and filter functionality.
- To allow users to view detailed job information.
- To enable bookmarking of preferred jobs.
- To improve user experience through a responsive interface

4 .PROJECT SCOPE

Included Features:

- Job listing display
- Search jobs by role
- Filter jobs by location
- View job details
- Save/bookmark jobs

Future Enhancements:

- User authentication
- Resume upload feature
- Online job application system
- Company profile management
- Real-time job update.

5.TECHNOLOGIES USED

- React.js
- JavaScript (ES6)
- HTML5
- CSS3
- React Hooks
- React Router

- Visual Studio Code
- Git & GitHub

APP.js

```
import React, { useState } from "react";
import "./App.css";

function App() {
  const jobs = [
    {
      id: 1,
      title: "Frontend Developer",
      company: "TCS",
      location: "Chennai",
      salary: "₹5 LPA",
      description: "Develop responsive web applications using React."
    },
    {
      id: 2,
      title: "React Developer",
      company: "Infosys",
      location: "Bangalore",
      salary: "₹6 LPA",
      description: "Build modern user interfaces with React."
    },
    {
      id: 3,
      title: "Java Developer",
      company: "Wipro",
      location: "Hyderabad",
      salary: "₹5.5 LPA",
      description: "Develop enterprise applications using Java."
    },
    {
      id: 4,
      title: "UI Developer",
      company: "HCL",
      location: "Chennai",
      salary: "₹4.5 LPA",
      description: "Design and develop attractive user interfaces."
    }
  ]
}
```

```
];
```

```
const [search, setSearch] = useState("");
const [location, setLocation] = useState("");
const [savedJobs, setSavedJobs] = useState([]);
const [selectedJob, setSelectedJob] = useState(null);
```

```
const filteredJobs = jobs.filter(
  (job) =>
    job.title.toLowerCase().includes(search.toLowerCase()) &&
    job.location.toLowerCase().includes(location.toLowerCase())
);
```

```
const saveJob = (job) => {
  if (!savedJobs.find((item) => item.id === job.id)) {
    setSavedJobs([...savedJobs, job]);
  }
};
```

```
return (
  <div className="container">
    <h1>Job Portal</h1>

    <div className="filters">
      <input
        type="text"
        placeholder="Search by Role"
        value={search}
        onChange={(e) => setSearch(e.target.value)}
      />

      <input
        type="text"
        placeholder="Filter by Location"
        value={location}
        onChange={(e) => setLocation(e.target.value)}
      />
    </div>

    <h2>Available Jobs</h2>

    {filteredJobs.length === 0 ? (
      <p>No Jobs Found</p>
```

```

    ) : (
      filteredJobs.map((job) => (
        <div className="job-card" key={job.id}>
          <h3>{job.title}</h3>
          <p><strong>Company:</strong> {job.company}</p>
          <p><strong>Location:</strong> {job.location}</p>

          <button onClick={() => setSelectedJob(job)}>
            View Details
          </button>

          <button onClick={() => saveJob(job)}>
            Save Job
          </button>
        </div>
      ))
    )}

    {selectedJob && (
      <div className="details">
        <h2>Job Details</h2>
        <h3>{selectedJob.title}</h3>
        <p><strong>Company:</strong> {selectedJob.company}</p>
        <p><strong>Location:</strong> {selectedJob.location}</p>
        <p><strong>Salary:</strong> {selectedJob.salary}</p>
        <p>{selectedJob.description}</p>
      </div>
    )}

    <div className="saved">
      <h2>Saved Jobs ({savedJobs.length})</h2>

      {savedJobs.map((job) => (
        <p key={job.id}>
          {job.title} - {job.company}
        </p>
      ))}
    </div>
  </div>
);
}

export default App;

```

App.css

```
body {
  font-family: Arial, sans-serif;
  background-color: #f4f4f4;
}
.container {
  width: 80%;
  margin: auto;
  padding: 20px;
}

h1 {
  text-align: center;
}

.filters {
  display: flex;
  gap: 10px;
  margin-bottom: 20px;
}

input {
  padding: 10px;
  width: 250px;
}

.job-card {
  background: white;
  padding: 15px;
  margin-bottom: 10px;
  border-radius: 8px;
}

button {
  padding: 8px 15px;
  margin-right: 10px;
  cursor: pointer;
}
details,
.saved {
```

```
background: white;  
padding: 15px; margin-top: 20px;
```

6.APPLICATION FLOW

1. User opens the application.
2. Home page displays available jobs.
3. User searches for a job role.
4. User applies location filters.
5. Filtered job results are displayed.
6. User clicks a job card to view details.
7. User bookmarks preferred jobs.
8. Saved jobs can be viewed later.

7.KEY REACT CONCEPTS USED

- **Components:** Used to create reusable UI elements.
- **JSX:** Used for designing user interfaces.
- **Props:** Used to pass data between components.
- **State Management (useState):** Used to manage job and bookmark data.
- **Event Handling:** Used for search and filter actions.
- **Conditional Rendering:** Used to display results dynamically.
- **React Router:** Used for navigation between pages.
- **Hooks:** Used for efficient state management.

8.EXPECTED OUTPUT

- Home page displaying job listings.
- Search bar for job role search.
- Location filter options.
- Detailed job information page.
- Bookmark feature for saving jobs.
- Responsive and user-friendly interface.

9.CHALLENGES FACED

- Managing state across multiple components.
- Implementing dynamic filtering functionality.
- Creating a responsive user interface.
- Handling bookmark data efficiently.

Solutions:

- Used React Hooks for state management.
- Implemented reusable components.
- Applied CSS responsive design techniques

10.LEARNING OUTCOMES

- Understanding React fundamentals.
- Building reusable React components.
- Managing application state using Hooks.
- Implementing search and filter functionality.
- Using React Router for navigation.
- Improving frontend development skills.

11.CONCLUSION

The Job Portal with Search & Filters project was successfully developed using React. The application effectively helps users search and explore job opportunities through filtering and bookmarking features. This project enhanced practical knowledge of React development, component-based architecture, and modern frontend application design.
